Level 2 Mathematics and Statistics, 2017 91261 Apply algebraic methods in solving problems

2.00 p.m. Friday 24 November 2017 Credits: Four

Achievement	Achievement with Merit	Achievement with Excellence
Apply algebraic methods in solving problems.	Apply algebraic methods, using relational thinking, in solving problems.	Apply algebraic methods, using extended abstract thinking, in solving problems.

Check that the National Student Number (NSN) on your admission slip is the same as the number at the top of this page.

You should attempt ALL the questions in this booklet.

Make sure that you have Formulae Sheet L2-MATHF.

Show ALL working.

If you need more space for any answer, use the page(s) provided at the back of this booklet and clearly number the question.

You are required to show algebraic working in this paper. Guess-and-check methods, and correct answer(s) only, will generally limit grades to Achievement.

Check that this booklet has pages 2–12 in the correct order and that none of these pages is blank.

YOU MUST HAND THIS BOOKLET TO THE SUPERVISOR AT THE END OF THE EXAMINATION.

(a) Simplify the following, leaving your answer with positive indices:

(i)	$3(4x)^{-2}$
(i)	$3(4x)^{-1}$

(ii)
$$\left(\frac{16x^4}{x^6}\right)^{\frac{3}{2}}$$

(b)	Fully	simplify the expression $\frac{2x^2 - 50}{9x^2 - 39x - 30}$.	

(c) David has mounted a square photo on a square piece of card as shown below.

The border around the photo is of constant width.

If the total area of the border is 200 cm², find the width of the border.

The photo has sides of length (n-2) cm while the card has sides of (2n+6) cm.

A teacher has hired a school bus for \$560 for a day trip with students.	A
The cost of hiring the bus is to be shared equally between the students.	
At the last moment, three of the students were unable to go.	
As a result, the cost to each of those who did go was increased by \$1.50.	
How many students finally went on the trip?

(a) Solve the following equation for x:

$$\log_2 x = 10$$

(b) Solve the following equation for x:

$$\log_x 49 = 2$$

Justify your answer.

(c)	Find the value of $\log_{\sqrt{5}}$	1	_)
(0)	Tind the value of $\log_{\sqrt{5}}$	125	;

(d)

A computer depreciates continuously in value from \$4699 to \$1500 over a period of 4.25 years.	AS
The value, $\$y$, of the computer t years after its value was $\$4699$ can be modelled by a function of the form	
$y = Ar^t$, where r is a constant.	
Find the computer's value after six years.

QUESTION THREE

(a) The quadratic equation $4x^2 + bx - 5 = 0$ has solutions $-\frac{1}{2}$ and $\frac{5}{2}$.

Find the value of b.

(b) For what value(s) of m does the equation $6x^2 - mx = -3$ have two equal roots?

Find the value(s) for	•		

Question Three continues on the following page.
